Photoshop Elements, which you can download from Adobe's website (`www.adobe.com`), is a feature-rich, more consumer-friendly version of Photoshop. It has many capabilities similar to those found in the full Photoshop program, but only one version can be installed at a time. The program includes a powerful layer-based image editing system, powerful drawing and painting tools, and innovative organizing capabilities. The up-front price for Photoshop elements is a bit more than that for a full version of Photoshop, but Adobe is offering student pricing, making it a great entry point for beginners. ## Exploring the Photoshop Workspace The Photoshop workspace provides the building blocks of an image — layers, pixels, and channels. You work with the layers to combine pieces from each image to create your final piece. You can add or delete any layer you like, as well as manipulate the pixels within each individual layer. You can also add paint tools to create shapes, blend colors, and add images or graphics as layers. In this section, you get a basic review of each of these areas. There are many options for working in Photoshop. The following sections just give you a quick overview of how you work with the program. For a complete guide to all Photoshop features, check out The Photoshop Book by Mark Osterman (published by Wiley Publishing, Inc.). If you're not sure what to do or how to do it, start with the fun (and creative) exercises in \_Photoshop for Dummies\_ by Nick Pearsall and Chris Bartell (also by Wiley Publishing, Inc.).

How To Structure A 10 Page Website Your customer's time is precious and most people today have a plethora of choices when it comes to finding goods and services they need. By creating a long list of products and services to be found within your own website, you can actually better your customers' experiences by giving them the information they seek. How To Structure A 10 Page Website: Your website should have 10 pages, not just one. Unless your website is optimized for the mobile phone, which can be a disaster, you cannot use a web designer to build you a web page that is more than 10 pages long. People don't know how to read anymore because it is so convenient to use the quick links on their phone for any search they need to do. This can literally make your life much easier. That is why you must create a structured website, not an unorganized one. How To Structure A 10 Page Website: You would be absolutely amazed at how many people arrive at your site without any experience at all, or even with just a basic understanding of how a website works, and think they can add or change things for their own benefit. This is why you need a structured website. It allows you to create a unique way for your customers to find the products and services they need and also benefit from your expertise. How To Structure A 10 Page Website: If you are working on a website for a client, don't charge them for a "quick job". It is only a job if you do it for free. You might get a few extra dollars to keep you going, but if you have a web designer who will work only on websites that pay him or her well, you will not be able to get the high quality work that only paid, professional designers are capable of producing. How To Structure A 10 Page Website: You must realize, though, that a structured website does not have to be long. It can be as short as 10 pages if you can clearly identify who you are, what you do and why your clients would want to work with you. If you have 10 pages and no visitor information whatsoever, you need to consider whether you have the needed information on your website or not. The bottom line is this: If your website is not clearly identifiable, your visitors will not go there. How To Structure A 10 Page Website: Try to get more than one opinion on your website. The way it is currently set up may
